

Submission Worksheet

Submission Data

Course: IT202-450-M2025

Assignment: IT202 - Milestone 3

Student: Colin R. (ctr26)

Status: Submitted | **Worksheet Progress:** 91%

Potential Grade: 8.45/10.00 (84.50%)

Received Grade: 0.00/10.00 (0.00%)

Started: 8/10/2025 9:26:53 PM

Updated: 8/11/2025 9:30:30 PM

Grading Link: <https://learn.ethereallab.app/assignment/v3/IT202-450-M2025/it202-milestone-3/grading/ctr26>

View Link: <https://learn.ethereallab.app/assignment/v3/IT202-450-M2025/it202-milestone-3/view/ctr26>

Instructions

1. Refer to Milestone3 of this doc:
<https://docs.google.com/document/d/1XE96a8DQ52Vp49XACBDTNCq0xYDt3kF29cO88EWVwfo/view>
2. Ensure you read all instructions and objectives before starting.
3. Ensure you've gone through each lesson related to this Milestone
4. Switch to the Milestone3 branch
 1. `git checkout Milestone3` (ensure proper starting branch)
 2. `git pull origin Milestone3` (ensure history is up to date)
5. Fill out the below worksheet
 - Ensure there's a comment with your UCID, date, and brief summary of the snippet in each screenshot
 - Ensure proper styling is applied to each page
 - Ensure there are no visible technical errors; only user-friendly messages are allowed
6. Once finished, click "Submit and Export"
7. Locally add the generated PDF to a folder of your choosing inside your repository folder and move it to Github
 1. `git add .`
 2. `git commit -m "adding PDF"`
 3. `git push origin Milestone3`
 4. On Github merge the pull request from Milestone3 to dev
 5. On Github create a pull request from dev to prod and immediately merge. (This will trigger the prod deploy to make the heroku prod links work)
8. Upload the same PDF to Canvas
9. Sync Local
10. `git checkout dev`
11. `git pull origin dev`

Section #1: (3 pts.) Api Data

Progress: 100%

⇒ Task #1 (1 pt.) - Concept of Data Association

Progress: 100%

Details:

- What's the concept of your data association to users? (examples: favorites, wish list, purchases, assignment, etc)
- Describe with a few sentences

Your Response:

The pokemon data that is associated with my users is their team. Users can collect new pokemon by battling oponents and select 6 pokemon to be their active team. Users will be able to switch their pokemon around and customize their pokemon.

Saved: 8/10/2025 9:28:26 PM

⇒ Task #2 (1 pt.) - Data Updates

Progress: 100%

Details:

- When an associated entity is updated (manually or API) how is the association affected?
 - Does the user see the old version of the data?
 - Does the user see the new version of the data?
 - Does the user need to have data re-associated or remapped?
- Explain why.

Your Response:

If a pokemon were to be updates after it became associated with a user, the association would need to be remapped in order to ensure the user has the most up to date version of their pokemon. This is to prevent any scenarios where a user is given a pokemon, but its stats are wrong. Once the stats are updated by the api or admin, the user would still have the old version of the pokemon.

Saved: 8/10/2025 9:31:46 PM

≡ Task #3 (1 pt.) - Handling Association

Progress: 100%

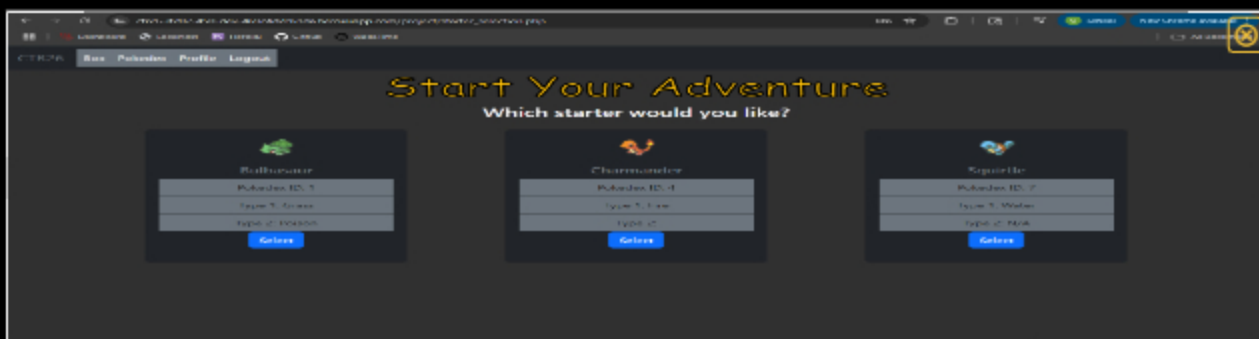

Part 1:

Progress: 100%

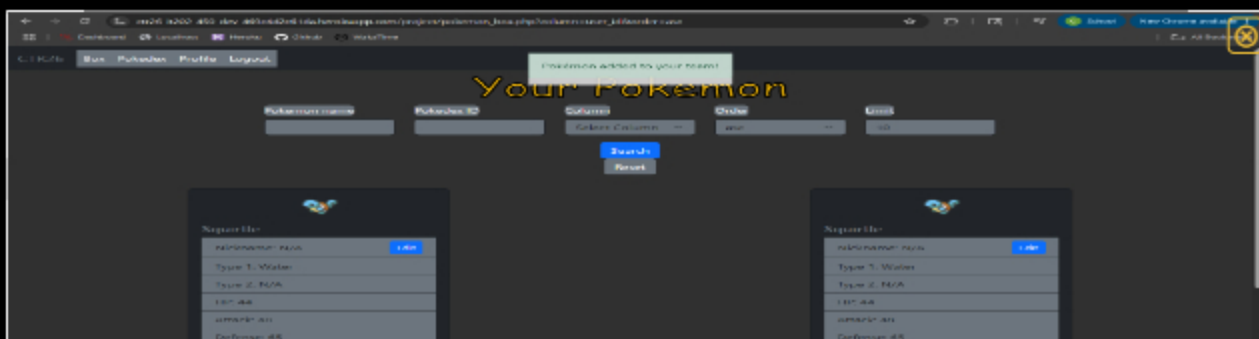

Details:

- Show an example page of where a user can get data associated with them

- Ensure heroku dev url is visible
- Caption if this is a user-facing page or admin page

Base screen

After selection

Saved: 8/11/2025 8:46:37 PM

⇒ Part 2:

Progress: 100%

Details:

- Describe the process of associating data with the user.
- Can it be toggled, or is it applied once?

Your Response:

The process of associating the date with the user involves taking only specific values from the original pokemon data, such as name, id, and stats, and adding it into a new tables that tracks the id of the user it belongs to. So, that second table stores all pokemon that have been assigned to players and can easily be searched through. The association is only applied once, so once a user gets a pokemon, it stays with that user.

Section #2: (6 pts.) Associations

Progress: 75%

☰ Task #1 (1.50 pts.) - Logged-in User's Associated Entities

Progress: 100%

Details:

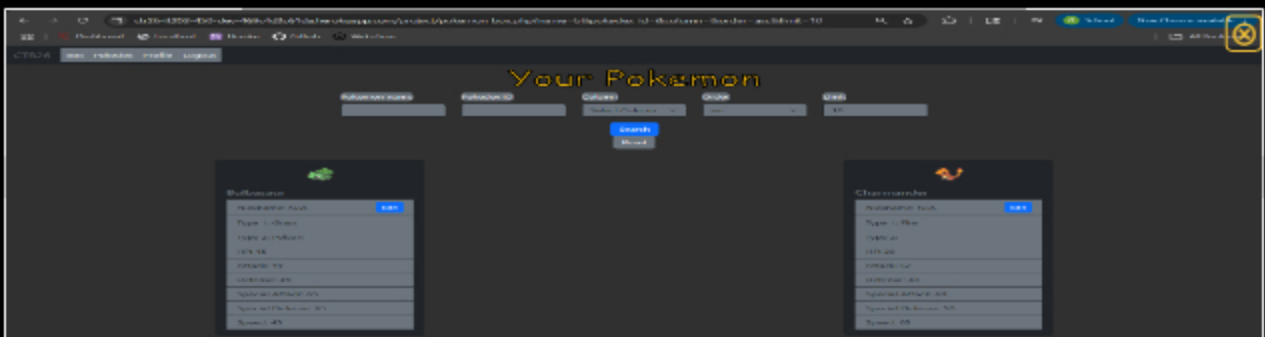

- Each line item should have a logical summary
- Each line item should have a link/button to a single view page of the entity
- Each line item should have a link/button to a delete action of the relationship (doesn't delete the entity or user, just the relationship)
- The page should have a link/button to remove all associations for the particular user
- The page should have a section for stats (number of results and total number possible based on the query filters)
- The page should have logical options for filtering/sorting
 - A limit should be applied between 1 and 100 and controlled by the user (server-side enforces rules)
 - A filter with no matching records should show "no results available" or equivalent

🖼️ Part 1:

Progress: 100%

Details:

- Show a few examples of this page from heroku dev with various filters applied
- Ensure heroku dev url is visible
- Ensure each requirement is visible

User box

Saved: 8/11/2025 9:21:35 PM

☞ Part 2:

Progress: 100%

Details:

- Describe how you solved showing the particular association output
- Describe how you solved the various items required for this page (i.e., line item requirements, stats, filter/sort, etc)

Your Response:

In the select query, I specified a user id which returns only the pokemon that the user has linked to them. I solved the list item requirements with another page but was unable to port it to this page.

Saved: 8/11/2025 9:21:35 PM

☰ Task #2 (1.50 pts.) - All Users Association Page

Progress: 0%

Details:

- Each line item should have a logical summary
- Each line item should include the username this entity is associated with
 - Clicking the username should redirect to that user's public profile
- Each line item should include a column that shows the total number of users the entity is associated with
- Each line item should have a link/button to a single view page of the entity
- Each line item should have a link/button to a delete action of the relationship (doesn't delete the entity or user, just the relationship)
- The page should have a section for stats (number of results and total number possible based on the query filters)
- The page should have logical options for filtering/sorting
 - A limit should be applied between 1 and 100 and controlled by the user (server-side enforces rules)
 - A filter with no matching records should show "no results available" or equivalent

🖼️ Part 1:

Progress: 0%

Details:

- Show a few examples of this page from heroku dev with various filters applied
- Ensure heroku dev url is visible
- Ensure each requirement is visible

≡ Task #3 (1.50 pts.) - Unassociated Page

Progress: 100%

Details:

- Each line item should have a logical summary
- Each line item should have a link/button to a single view page of the entity
- The page should have a section for stats (number of results and total number possible based on the query filters)
- The page should have logical options for filtering/sorting
 - A limit should be applied between 1 and 100 and controlled by the user (server-side enforces rules)
 - A filter with no matching records should show "no results available" or equivalent

🖼️ Part 1:

Progress: 100%

Details:

- Show a few examples of this page from heroku dev with various filters applied
- Ensure heroku dev url is visible
- Ensure each requirement is visible

Part 2:

Progress: 100%

Details:

- Describe how you solved showing the particular association output
- Describe how you solved the various items required for this page (i.e., line item requirements, stats, filter/sort, etc)

Your Response:

I solved the problem of showing particular association data by creating a separate table that stores the pokemon data with a user id attached. For this page, I go through that table and only select rows that have the matching user id of the current user. For the view page, I just created a page that shows the same card, but with more of the pokemons values that would have looked clunky if it were on the main page. For the results stats, I had to run the original query for the users search with the filter, and then run it again for without the filter in order to have the value to compare it with. This is how i got the x/y text for the search. For the sorting, I just took the values into the input field and use them as part of the query in order to get the sorted list.

Task #4 (1.50 pts.) - Admin Association Page (Like User Roles)

Progress: 100%

Details:

- Describe how your code solves the requirements; be clear

Your Response:

I solved the requirements by duplicating the search page into 2 columns. Each column is responsible for getting each part of the data. Upon clicking the toggle button, both forms data is submitted and read by the function that associates the data.

Progress: 100%

Progress: 100%

Details:

Briefly answer the question (at least a few decent sentences)

Briefly answer the question (at least a few decent sentences)

Your Response:

For this project, I learned how to make websites and ui. I have never made anything this in depth with websites, but it was a fun experience that I would want to continue. I did not get to make all the interactive elements that I wanted, but I might finish that later in the future.

Saved: 8/11/2025 9:28:07 PM

⇒ Task #2 (0.33 pts.) - What was the easiest part of the assignment?

Progress: 100%

Details:

Briefly answer the question (at least a few decent sentences)

Your Response:

The easiest part of this assignment was coming up with ideas. Once I found the pokemon api and understood what I could make my project, it became a lot easier for me to think about how to solve the requirements. It also helps that I have a lot of experience with pokemon and pokemon related websites.

Saved: 8/11/2025 9:29:08 PM

⇒ Task #3 (0.33 pts.) - What was the hardest part of the assignment?

Progress: 100%

Details:

Briefly answer the question (at least a few decent sentences)

Your Response:

The hardest part of this assignment was learning all of this from scratch. I struggle to understand coding concepts from explanations, so most of the time I had to experiment with the code in order to actually understand how everything works. This helps me later on in the assignments, but at the start it can be a struggle.
