

Submission Worksheet

Submission Data

Course: IT202-450-M2025

Assignment: Milestone 2 API Testing

Student: Colin R. (ctr26)

Status: Submitted | **Worksheet Progress:** 100%

Potential Grade: 10.00/10.00 (100.00%)

Received Grade: 0.00/10.00 (0.00%)

Started: 7/14/2025 8:53:03 PM

Updated: 7/14/2025 9:25:46 PM

Instructions

- Overview Link: <https://youtu.be/86v8Ak0E3XE>
- 1. Ensure you read all instructions and objectives before starting.
- 2. Ensure you added your API choice to the Google doc shared on Canvas (selections must be unique, no two students can use the same exact API)
- 3. Create a new branch from Milestone2 called M7-Homework
 - 1. `git checkout Milestone2` (ensure proper starting branch)
 - 2. If you don't have Milestone2 yet, create it from Milestone1
 - 3. `git pull origin Milestone2` (ensure history is up to date)
 - 4. `git checkout -b M7-Homework` (create and switch to branch)
- 4. Follow the lesson from
 - Add `testApi.php` to your project folder
 - Immediately record to history
 - `git add public_html`
 - `git commit -m "adding M7 HW baseline files"`
 - `git push origin M7-Homework`
 - Create a Pull Request from M7-Homework to Milestone2 and keep it open
- 5. Fill out the below worksheet
 - Ensure you add the UCID/Date and details comments as you work
 - Get the example working with your chosen API
- 6. Once finished, click "Submit and Export"
- 7. Locally add the generated PDF to a folder of your choosing inside your repository folder and move it to Github
 - 1. `git add .`
 - 2. `git commit -m "adding PDF"`
 - 3. `git push origin M7-Homework`
 - 4. On Github merge the pull request from M7-Homework to Milestone2
 - 5. On Github create and merge the pull request from Milestone2 to dev
 - 6. On Github create a pull request from dev to prod and immediately merge. (This will trigger the prod deploy to make the Heroku prod links work)

- deploy to make the Heroku prod links work
8. Upload the same PDF to Canvas
 9. Sync Local
 1. git checkout dev
 2. git pull origin dev
 3. git checkout Milestone2
 4. git pull origin Milestone2

Section #1: (2 pts.) Analyze Api Choice

Progress: 100%

⇒ Task #1 (0.40 pts.) - API Link

Progress: 100%

⇒ Task #2 (0.80 pts.) - Quota and Limitations

Progress: 100%

Your Response:

The basic subscription for my api had a quota of 100 calls per month, but I made the decision to upgrade to the first tier subscription since it was really cheap. This changes my quota to 1000 per day which will allow me to just focus on the project, rather than being over conscious about how many calls I am using.

Saved: 7/14/2025 8:55:02 PM

⇒ Task #3 (0.80 pts.) - Goal Data

Progress: 100%

Details:

- Clearly note what type of data you'll be using
- Clearly note the specific properties you intend to use (it's likely not all of them)

Your Response:

I plan on using the Pokemon data type, specifically stats and types, in order to make some kind of pokemon inspired app. The types play different roles against each other and the stats would determine a pokemons strength.

```
<div class="container-fluid">
  <h1>Stock Info</h1>
  <p>Remember, we typically won't be frequently calling live data from our API, this
  <form>
    <div>
      <!-- Kept the input type since it still works but changed the names -->
      <label>Pokemon</label>
      <input name="name" />
      <input type="submit" value="Fetch Pokemon" />
    </div>
  </form>
  <div class="row">
```

In order to get this test working, I had to go through all of the code that sets up the api and change it to match my case. First I had to change the data since my function only requires a single parameter. I then had to change the host and endpoint. Finally, I had to change the setup

single parameter. I then had to change the host and endpoint. Finally, I had to change the setup for the api key in both the test file and the load keys file.

Section #3: (2 pts.) Misc

Progress: 100%

☰ Task #1 (0.67 pts.) - Github Details

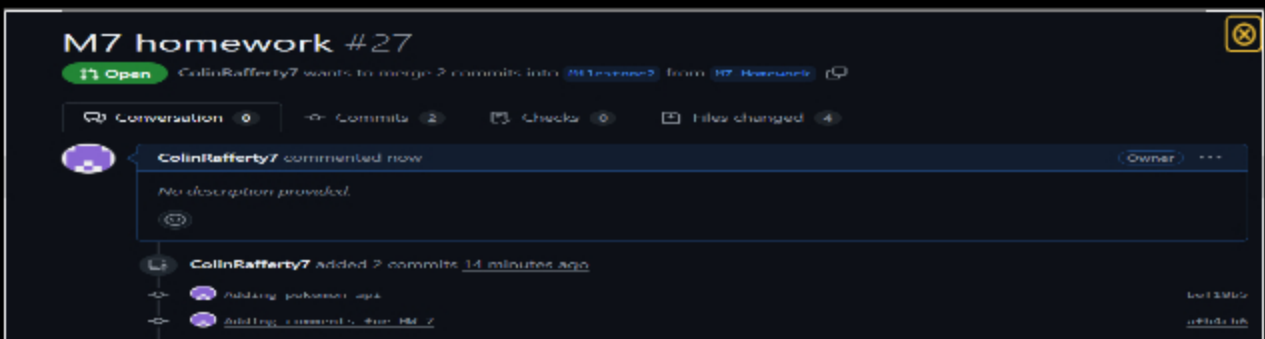

Progress: 100%

📁 Part 1:

Progress: 100%

Details:

From the Commits tab of the Pull Request screenshot the commit history Following minimum should be present

The screenshot shows a GitHub Pull Request titled "M7 homework #27" by ColinRafferty7. It is currently open and shows a comment from ColinRafferty7 stating "No description provided." Below the comment, the commit history is visible, showing two commits: "Adding homework app" and "Adding comment to form M7 2". The interface includes tabs for Conversation, Commits, Checks, and Files changed.

📁 Task #2 (0.67 pts.) - WakaTime - Activity

Progress: 100%

Details:

- Visit the WakaTime.com Dashboard
- Click **Projects** and find your repository
- Capture the overall time at the top that includes the repository name
- Capture the individual time at the bottom that includes the file time
- Note: The duration isn't relevant for the grade and the visual graphs aren't necessary

Task #3 (0.67 pts.) - Reflection

Progress: 100%

Task #1 (0.33 pts.) - What did you learn?

Progress: 100%

Details:

Briefly answer the question (at least a few decent sentences)

Your Response:

In this assignment, I learned what APIs actually are and how they can be used in an application. With the example talked about, using stack information in order to

an application. With the example talked about, using stock information in order to create a game, I was able to come up with way more ideas for what my project could be. I realized I was not just limited to adding items into a cart.

Saved: 7/14/2025 9:22:34 PM

⇒ Task #2 (0.33 pts.) - What was the easiest part of the assignment?

Progress: 100%

Details:

Briefly answer the question (at least a few decent sentences)

Your Response:

The easiest part of this assignment was adding the comments onto all of the code that had to change. I spent enough time testing and trying to understand what I was doing, that by the time I had to explain it, it was really easy.

Saved: 7/14/2025 9:23:38 PM

⇒ Task #3 (0.33 pts.) - What was the hardest part of the assignment?

Progress: 100%

Details:

Briefly answer the question (at least a few decent sentences)

Your Response:

The hardest part of this assignment was picking an api key for me. I spent a lot of time trying to find one that seemed suitable for the criteria and settled on a basketball api. I wasn't entirely happy with this because my understanding of the project at the time was that I would just be saving the data to the accounts in a simple way. It was not until the professor brought up his example plan that I realized the extent of my possibilities. This made choosing my api a lot easier.
